

Advanced System Repair Pro

Device Driver Detection and Update

Regular maintenance of a computer, its operating system, and applications is often overlooked, often left to when some part no longer works or when a new application requires something specific.

Of the areas that should be checked regularly, device drivers can also be one of the more problematic and introduce an element of risk due to the presence of scam websites; offering to scan your system for free and provide driver updates. Even genuine driver

downloads can be harmful if not installed correctly.

To mitigate these factors, Advanced System Repair Pro checks a host of system drivers and reports where updates are available. To test this functionality, Checkmark Certified froze system and driver updates on a number of host machines for a period of between 1-4 weeks. After this period, ASRPro was used to scan the system and check for available driver updates.

Test Outcome

Advanced System Repair Pro accurately detected driver details for all of the selected hardware and devices. Where drivers were available, ASRPro detailed the version that was currently installed and the version that was recommended by the solution. Of note during this test was that ASRPro would sometimes recommend an older driver where a generic driver was installed, and a first party driver was available.

<i>Driver Type</i>	<i>Detected</i>	<i>Updated</i>
<i>Display Adaptor</i>	✓	✓
<i>Network Adaptor</i>	✓	✓
<i>Soundcard</i>	✓	✓
<i>Ethernet NIC</i>	✓	✓
<i>Wireless NIC</i>	✓	✓
<i>SATA Device</i>	✓	✓

Advanced System Repair Pro – Product Overview

While some system clean-up utilities may focus on a given area, such as driver updates, system registry, or disk fragmentation, ASR provides a complete system repair capability; including a malware detection and removal engine that has, separately to this test, been awarded Checkmark Certification in its own right.

Running of the scan is comparatively fast, especially considering the breadth of areas covered, and results are displayed to the user in a clear and concise manner.

The UI is well designed and permits a good degree of user control and configuration, without becoming a maze of individual option screens and settings.

Aside from making noticeable improvements to the system responsiveness and general performance, ASR also introduced a minimal resource footprint of its own. In contrast to products that clean systems while proving a drain on performance themselves.

Summary

ASR is a complete solution that protects the end user while improving system stability and performance.

Disclaimer

Checkmark Certified is dedicated to ensuring the highest standard of security product testing in the industry, it is never possible within the scope of any given test to completely and exhaustively validate every variation of the security capabilities and/or functionality of any particular product tested and/or guarantee that any particular product tested is fit for any given purpose. Therefore, the test results published within any given report should not be taken and accepted in isolation.

Potential customers interested in deploying any particular product tested by Checkmark Certified should seek further confirmation that the said product will meet their individual requirements, technical infrastructure and specific security considerations. All test results represent a snapshot of security capability at one point in time and are not a guarantee of future product effectiveness and security capability.

Checkmark Certified provide test results for any particular product tested, most relevant at the time of testing and within the specified scope of testing and relative to the specific test hardware, software, equipment, infrastructure, configurations and tools used during the specific test process.
